

Specialty Concrete Maintenance, Repair & Restoration

Turnkey solutions for long-lasting results

- › Masonry
- › Façades
- › Balconies
- › Parking Garages
- › Bridges
- › Stairs
- › Inspections

Return structural integrity and safety to concrete structures, including commercial buildings and industrial facilities. Trust our local engineering experts and skilled craft workers to evaluate, design and manage your concrete assets for long-term performance and hazard risk mitigation. If you need a comprehensive or complex solution, such as repairing and restoring post-tensioned concrete, we can help. Let us provide scaffolding, shoring, heat trace systems, or other related services for a full turnkey project.

BY BRAND SAFWAY

Specialty concrete inspection, restoration and rehabilitation

Safety and structural integrity – At Work For You®

Weather, time and normal wear and tear can damage concrete and jeopardize the structural integrity of buildings, structures and surfaces. Though extremely durable, concrete's porous nature makes it susceptible to moisture, which can lead to cracks and corroding rebar. Proper care and maintenance can minimize damage and save on repair costs. Platinum Concrete & Masonry Restoration offers the widest array of turnkey concrete and masonry solutions, including:

- › Inspection and audits
- › Repair and restoration
- › Access and scaffolding
- › Shoring
- › Post-tensioning repairs
- › Heat shield/trace systems
- › Non-skid and traffic coatings
- › Epoxy injection
- › Waterproofing
- › Water drainage solutions
- › Expansion joints
- › Carbon fiber and FRP wraps

With 30 years of experience in concrete care and restoration, our experts will work with you to assess your project, identify the root cause of any issues and develop a plan for a long-lasting solution.

Repair and restoration of a busy parking structure

In 2022, a hospital system in New York City needed repairs to their parking garage. Weather and years of wear had led to significant corrosion damage to the reinforcing steel, causing the concrete to spall and crack. After a thorough assessment, we worked with the customer to develop a comprehensive concrete repair and restoration solution, which included a custom, modified traffic-bearing system and waterproofing. We also provided shoring so the garage could remain safely in use during repairs. The customer was highly satisfied with our efficiency and quality of services, as well as substantial time and cost savings.

BrandSafway provides access and industrial service solutions with turnkey installation, engineering support and safety training.
